

Watershed Rehabilitation Status January 2018 Report

2017 Activities

\$12 million was received in discretionary funding for rehabilitation. This is a continuance of the typical annual investment in watershed rehabilitation, which recognizes the critical role of these watershed structures in flood management, water supply, erosion control, agricultural productivity, recreation and wildlife habitat. This funding helps to repair aging infrastructure, create jobs and commerce, and protects homes and families.

In 2015, project sponsors from 27 States submitted funding requests for 393 dams totaling more than \$502 million. This level of funding request demonstrates the need for dam rehabilitation assistance throughout the country. The funding requests far exceeded available funding. In 2017, projects ready for construction and design received priority for funding. Funding for construction was provided for 5 dams in 3 states and funding for designed was provided for 20 dams in 7 states.

In 2017, NRCS continued to provide funding for assessments of high-hazard dams based on the risk index. The agency utilized \$1,464,000 to complete assessments for 72 dams.

Plan Implem.: Plan is authorized and the project is ready for or is being designed or is under construction.

* Funded with CCC funds authorized in the 2014 Farm Bill and FY 2015 Appropriations Act

There are multiple dams in some lines. These dams are in the same watershed, same county, and have the same status:
Example: Brush Creek 9; 14; 15.
